

Climate & health

A healthy environment is vital for human health and development. We know that our health depends on clean air and water, fresh food and exercise, but it is less well known that we need a stable, predictable climate for our health too.

We can help your school become more climate-friendly by:

- Increasing active travel
- Eating more plants
- Reducing waste
- Using less energy
- Connecting with nature
- Getting climate-ready

Teaching students to look after the health of the planet and their own physical and mental health is an important part of the Victorian Curriculum. Incorporating Climate & Health into school policies, practices and teaching and learning opportunities helps to fulfil curriculum obligations while reinforcing positive climate and health messages.

HOW TO GET INVOLVED:

Meet with us to discuss how your school can get involved
